RESEARCH EXPERIENCE

- Aug 2018 : Graduate Research Assistant. School of Interactive Computing, Georgia Tech.
Present : My Ph.D. thesis posited and empirically examined the theoretical framework of Mutual Theory of Mind for human-AI communication. My work made theoretical, design, and empirical contributions for the next generation of AI systems to continuously construct, recognize, and respond to human perceptions of AI during human-AI communication. I leveraged both qualitative and quantitative methods in my research. The methods I commonly use are semi-structured interviews, survey, co-design, NLP, statistical modeling, experiment design, inferential and descriptive statistics, etc.
- May 2022 : Research Intern. Google Research, People+AI Research (PAIR) team.
Aug 2022 : Mentors: Dr. Lauren Wilcox and Dr. Michael Terry
Conducted semi-structured interviews with 15 UX practitioners and 8 Responsible AI Experts to understand how current industry UX practices are adapting to meet responsible AI challenges, especially in the context of large language models and generative AI. This work was published as a full paper at CHI'2023 and was selected as one of the five papers as CHI 2023 Editors' Choice in Human-Centered AI.
- May 2021 : Research Intern. IBM Research, Almaden Lab.
Aug 2021 : Mentors: Eric Liu, Dr. Robert Moore, and Dr. Guang-Jie Ren
Led and conducted qualitative studies to opportunities in augmenting B2B practices. Findings from my internship project has influenced the team's direction in building and designing human-centered AI technologies in B2B context.
- Jun 2017 : Undergraduate Research Assistant. HCDE, University of Washington.
Dec 2017 : Advised by Dr. Sean Munson and Dr. Julie Kientz. I worked on two HCI projects examining the patient-provider collaboration among patients with Irritable Bowel Syndrome (IBS) and designing user value scale in computing technologies. In both projects, I assisted the lead Ph.D. student in conducting user interviews and surveys, and efforts in paper-writing.
